About Me

A dedicated **Software Developer, IT Support, and Data Analyst** with hands-on experience in **SaaS** and **ERP development**, as well as delivering large-scale client-tailored applications. Proven track record in building end-to-end digital solutions, implementing clean architecture, and designing reliable backend services and RESTful APIs to optimize operational workflows. Backed by expertise in advanced infrastructure and **web performance optimization (authentication and authorization, row-level security, rate limiting, caching and CDN, load balancers and scaling, error tracking and logging, web security, hosting and deployment)**.

Extensive hands-on experience in developing core institutional systems, such as successfully optimizing document workflows for BNNP DIY and reducing mail tracking and processing time by 40%, building an integrated environmental reporting platform for DLH (Environmental Agency) Majalengka, serving as a Practical Assistant Lecturer to facilitate course material delivery and troubleshoot computer hardware and systems in the laboratory, and sharpening data analytical skills through a specialized **Data Analyst course**. Proficient in Python, Node.js (Express.js and Nest.js), React.js, Flutter, and MySQL, with a strong capability in solving complex operational challenges and delivering user-centric digital solutions within Agile teams.

Education

Universitas Teknologi Yogyakarta

Bachelor of Informatics | GPA: 3.72/4.00

Graduation: 2026

Work Experiences

BNNP DI Yogyakarta (Internship)

Fullstack Web Developer | Sep 2025 - Jan 2026

- Developed a web-based document monitoring system to track incoming letters and their disposition across departments
- Built backend services using Node.js (Express.js) and integrated with MySQL database
- Developed frontend interface with Flutter Web to display real-time tracking of document status
- Improved administrative efficiency in document handling and tracking

DLH Majalengka (Final Project / Thesis Project)

Fullstack Mobile Developer | Dec 2025 - Feb 2026

- Developed an interactive map-based application for reporting illegal waste locations. Built backend services using Node.js (Express.js) and integrated with MySQL database
- Built mobile application using Flutter and backend API using Node.js
- Designed and integrated MySQL database to manage user reports and geolocation data
- Conducted field research and interviews with the Head of DLH Majalengka to gather requirements
- Designed system to improve environmental reporting and public participation

Universitas Teknologi Yogyakarta (Part Time)

Lab Teaching Assistant (Aplikasi Teknologi Informasi) | Sep 2024 - Jan 2025

- Served as a Teaching Assistant for the Application of Information Technology course, leveraging fullstack developer expertise to deliver comprehensive learning materials on office applications, data processing using Power BI, and website development using WordPress.
- Guided students through practical sessions in managing office software (Microsoft Word, Microsoft Excel, Microsoft Power Point), building interactive data dashboards with Power BI, and deploying functional websites via WordPress.
- Evaluated student assignments and provided technical feedback, combining practical tools training with solid development principles.

SMK YPIB Majalengka (Part-Time)

Informatics Teacher | Aug 2026 - Present

- Deliver comprehensive Informatics and IT lessons to vocational high school students, focusing on core computing principles and digital skills.
- Design practical curriculum and learning materials covering IT fundamentals, software application usage, and digital literacy.
- Guide students through hands-on computer lab sessions and evaluate project-based assignments to assess technical understanding.

Project Experiences

Data Analyst & Predictive Modeling Project: Finanku Credit Risk Analysis (Online Course Project)

Data Analyst | 2026

- Developed a default prediction model with **python** for credit card facilities to mitigate operational and financial loss risks for the company
- Analyzed historical customer data to identify risk patterns and key factors causing defaults in instant approval services.
- Translated business requirements from Credit Division stakeholders into accurate risk analysis metrics to support safer credit disbursement.

Rawuh - Attendance Management Application (Academic Project)

Frontend Developer | 2025

- Developed Rawuh, a modern and secure attendance management application powered by facial recognition technology.
- Built responsive, intuitive, and user-friendly interfaces for core modules, including the User Dashboard, Attendance History, and Admin Management screens.
- Integrated complex backend APIs and managed real-time data flow for face recognition authentication and attendance logging.
- Implemented secure user authentication (JWT tokens) and optimized client-side state management for fast and reliable performance.
- Collaborated closely with the Backend Engineer to align on API contracts, troubleshoot integration challenges, and optimize system workflows.

GreenAct - Waste Management Reporting Web Application (Collaboration Project with Himmaka Tasikmalaya)

Fullstack Developer | 2026

- Developed GreenAct, an interactive map-based web application designed to digitize and streamline waste management reporting in collaboration with student associations from Majalengka and Tasikmalaya.
- Built robust backend services using Node.js and integrated with MySQL database to manage user reports, geolocation data, and multi-stakeholder workflows.
- Designed and built multi-stakeholder dashboards connecting citizens, village heads, Environmental Agency (DLH) admins, and field officers into a single information system.
- Implemented real-time mapping features enabling citizens to pinpoint illegal waste locations and support regional cleanup initiatives like "Jumat Bersih".
- Collaborated with student teams and stakeholders to align project requirements, ensuring the platform drives data-based environmental policies and active public participation.

Furniture Recommendation System (Collaboration Project with Data Science Students)

Fullstack Developer | 2026

- Developed a full-stack web application for a furniture recommendation system in a cross-functional collaboration with Data Science students.
- Built the backend architecture using Node.js and Express to handle client requests and integrate the machine learning recommendation models.
- Designed and implemented a responsive React.js frontend interface to deliver personalized furniture suggestions seamlessly to users.

Coffee Shop Website (Freelance Project)

Fullstack Web Developer | 2024

- Built a coffee shop website with online ordering system
- Integrated Midtrans payment gateway API for secure online transactions
- Developed responsive UI and backend system for handling orders

Portfolio Website (Freelance Project)

Web Developer | 2025

- Developed a personal portfolio website for a Communication student
- Designed responsive and user-friendly interface with html, css, javascript
- Customized layout and content based on client needs

ADDITIONAL INFORMATION

Technical & Soft Skills :

- **Programming & Frameworks:** Node.js (Express.js), Python (Flask and FastAPI), Flutter (Dart), PHP (Laravel), React.js
- **Database:** MySQL, PostgreSQL, Firebase
- **Tools & Others:** REST API, Git, Midtrans API, MVVM, GetX, Room, SQLite, MVC Architecture
- **System Design:** ERD, UML, DFD, Wireframing
- **Documentation:** PRD, Architecture Document, Design Document, Database Schema Document
- **Web Performance Optimization:** authentication and authorization, role level security, rate limiting, cache and cdn, load balancer and scaling, error tracking, web security, and log, hosting and deployment
- **Soft Skills:** Problem Solving, Analytical Thinking, Teamwork, Communication

Online Course:

- DATA ANALYST PROJECT: PREDICTION MODEL - MySkill (2026)
- Data Analyst Fundamental, Data Analyst Preparation, Statistic - MySkill (2026)
- Node.js (Express.js) Project: Parking System - MySkill (2026)
